The **FE060-10-IPM** is a FlexPro® series servo drive with IMPACT™ architecture.

The **FE060-10-IPM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FE060-10-IPM** utilizes Ethernet/IP network communication and is configured via USB. All drives and motor parameters are stored in non-volatile memory. *ADVANCED* Motion Controls' Ethernet/IP protocol operates based on a control state machine as defined by CANopen standards. CIP Motion and CIP Sync are not currently supported.
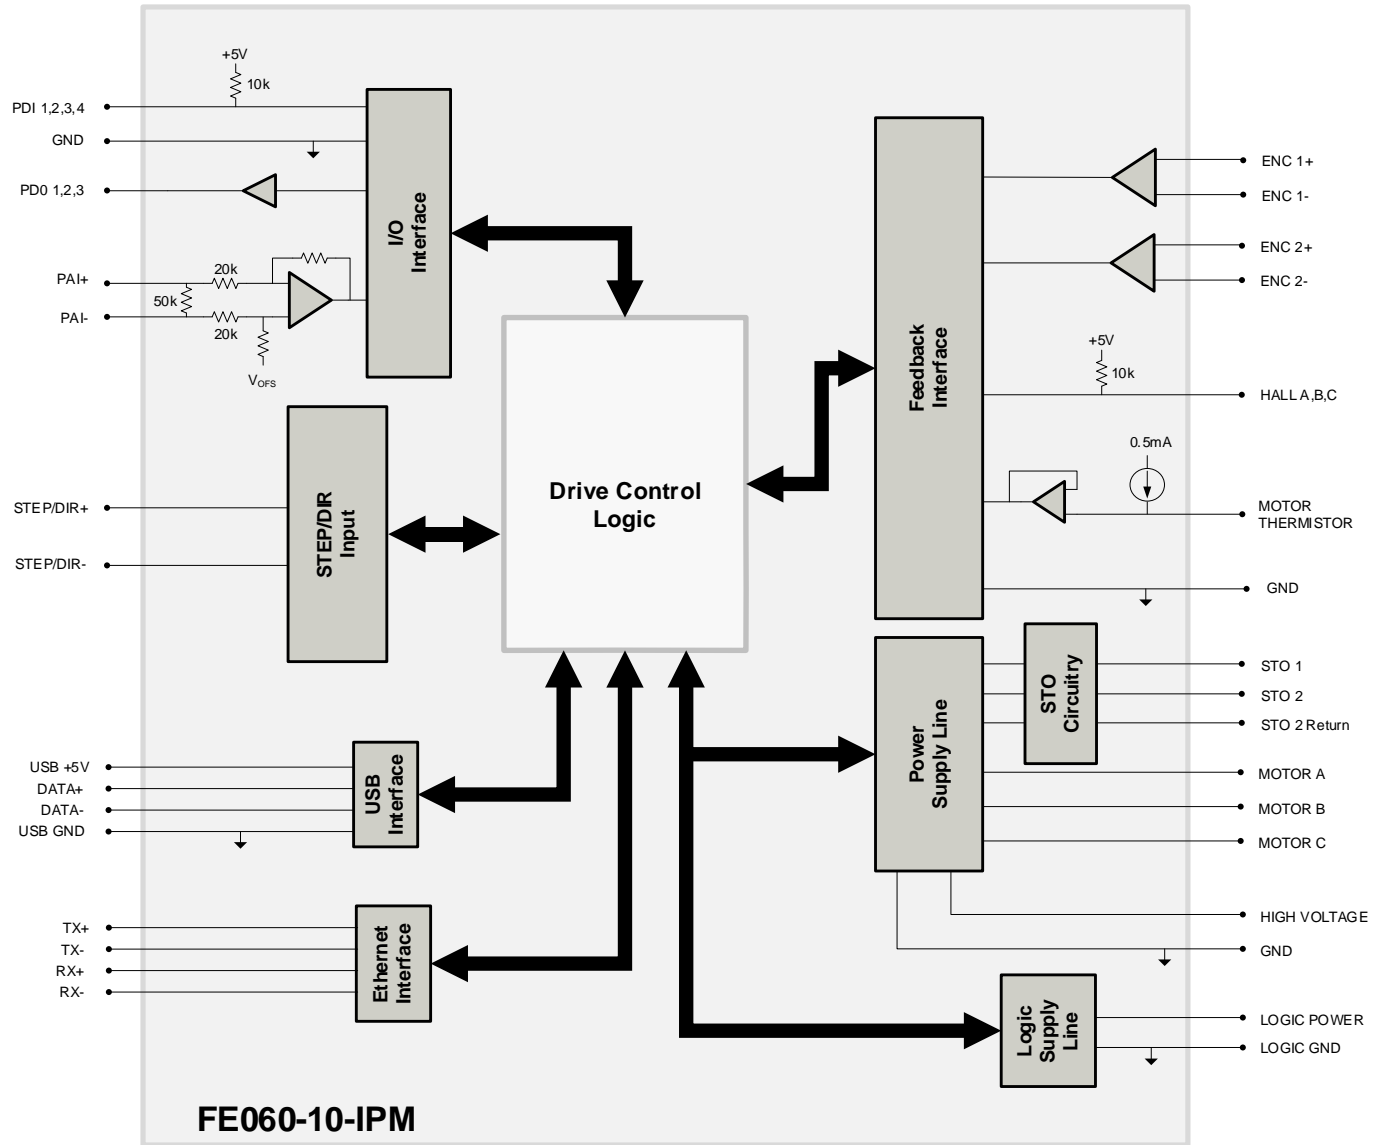

IMPACT™ (**I**ntegrated **M**otion **P**latform **A**nd **C**ontrol **T**echnology combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

INFORMATION ON APPROVALS AND COMPLIANCES

US and Canadian safety compliance with UL/IEC 61800-5-1, the industrial standard for adjustable speed electrical power drive systems. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products.

Compliant with European EMC Directive 2014/30/EU on Electromagnetic Compatibility (specifically EN 61000-6-4:2007/A1:2011 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2014/35/EU (specifically, EN 60204-1:2019, a Low Voltage Directive to protect users from electrical shock).

The RoHS Directive restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.

*Safe Torque Off (STO) Inputs*
The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual. Consult the hardware installation manual for more information.

HARDWARE INFORMATION

LED Functionality

LINK/ACT IN (P1-51); LINK/ACT OUT (P1-52); STATUS (P1-53);

The *LINK/ACT IN, LINK/ACT OUT, MOD_STATUS* and *NET_STATUS* pins serve as Ethernet/IP network indicators. On a standard RJ-45 connector used with Ethernet/IP network topology, the typical network indicator LED locations are as shown in the below diagrams. **Note that the drive features signals for connection to LEDs on an RJ-45 connector, but the connector itself is not included on the drive.**
LINK/ACT IN and *LINK/ACT OUT* are used to drive the corresponding LINK IN and LINK OUT LEDs on a typical RJ-45 connector. The MOD_STATUS pin is used to drive the Module Status LED, and the NET_STATUS pin is used to drive the Network Status LED. Consult the hardware installation manual for recommended wiring connections. The LED Function Protocol tables below describe typical LED functionality.
